

PERRY BIOMASS

ENGINEERING

Easy delivery, movement and storage of your Biomass fuels

BIOINTAKE • BIOBIN • BIOBUNKER

Designed and manufactured in the UK by bulk handling specialists Perry Engineering, this range of pre-galvanised equipment can be supplied to bespoke requirements or modular built on-site.

BIOINTAKE

Designed for fast intake of Biomass fuels from a tipping truck, delivering direct to your storage bin or bunker.

- Capacity 60m³ per hour in G50 W30 forestry chip.
- All galvanised construction.
- Winch operated lid.
- Fully pre-wired “plug and play” option available.
- Only requires basic flat concrete base so no expensive civil work required.

BIOBIN

For bulk storage of all Biomass fuels.

- Capacity up to 55m³.
- All galvanised construction.
- Easy on-site build.
- Sight glasses and access doors.
- Can be clad with timber or box profile sheeting.

BIOBUNKER

For localised storage of sawdust, wood pellets, G50 wood chip, chopped straw, Miscanthus and grain; ideal for larger houses and offices.

- Capacity up to 9.5m³.
- Modular design.
- All galvanised construction.
- Inverter controlled integral auger.
- Easy fill from dumpy bags, loader buckets or hand.

As well as these standard items we can tailor make storage and handling systems to your requirements.
